Orell Garten

Ship. Fix. Stop.

That's what my 2-week Value Audit tells you about your tech projects.

Your team showed a great demo. Nothing shipped.
I find out why, what it costs you and what to do first.

What you get in 2 weeks

1 The Verdict

What to ship, fix or stop, each with a € range and a confidence level.

2 The Blockers

Why the project stalled. Data, integration, ownership or business case.

3 The Roadmap

What to do first, what it costs, how fast it pays back, who owns it.

How it works

1

Week 1: Kick-Off-Meeting, inventory, system and data analysis

2

Week 2: Verdicts, roadmap and a readout with you.

What I need from you

A few hours of stakeholder time, access to analytics or logs, cloud and cost data.

What you can rely on

A fixed scope and fixed fee, I do not sell tools, and the report stands on its own: you can hand it to anyone.

I have taken systems from prototype to production.
At a previous client, I helped cut traffic costs by 12% and speed up search by 80%.
